FILE: App-Complete/design_guidelines.md

Design Guidelines: Safe Connect - Personal Safety App

Architecture Decisions

Authentication

****Auth Required**:** Yes

- ****Implementation**:** Use SSO (Apple Sign-In for iOS, Google Sign-In for cross-platform)
- ****Rationale**:** User data includes sensitive personal details and emergency contacts that must be securely stored and synced across devices
- ****Auth Screens**:**
 - Onboarding/Welcome screen explaining app purpose
 - Login/Signup with SSO buttons
 - Privacy policy & terms of service links
 - Account screen with logout and delete account options (nested under Settings > Account > Delete with double confirmation)

Navigation Architecture

****Root Navigation**:** Tab Navigation (3 tabs)

- ****Tab 1 - Home**:** Quick access to SOS and active journey tracking
- ****Tab 2 - Journey**** (Center, Core Action): Start/manage tracked journeys
- ****Tab 3 - Profile**:** User details, emergency contacts, settings

****Information Architecture**:**

1. ****Onboarding Flow**** (Stack-only, first-time users):
 - Welcome → Profile Setup → Emergency Contacts → Permissions Request → Home
2. ****Main App**** (Tab Navigation):
 - Home Tab Stack: Home → Journey History → Journey Details
 - Journey Tab Stack: Journey Setup → Active Journey → Route Selection
 - Profile Tab Stack: Profile → Edit Profile → Emergency Contacts → Settings

Screen Specifications

1. ****Home Screen**** (Tab 1)

- ****Purpose**:** Primary emergency access point and journey status overview
- ****Layout**:**
 - Header: Transparent, title "Safe Connect", right button (settings gear icon)
 - Main content: Scrollable
 - Safe area insets: top = headerHeight + Spacing.xl, bottom = tabBarHeight + Spacing.xl
- ****Components**:**
 - Large, prominent SOS button (center, above fold) - circular, high contrast
 - Voice activation status card (shows if listening for code word)
 - Active journey card (if journey in progress) with countdown timer
 - Recent journey history list (last 5 journeys)
 - Quick action: "Start Journey" button
- ****Visual Hierarchy**:** SOS button must be the most visually dominant element

2. ****Active Journey Screen**** (Modal from Journey Tab)

- ****Purpose**:** Real-time journey monitoring with emergency access
- ****Layout**:**
 - Header: Custom, transparent with "Cancel Journey" left button
 - Main content: Non-scrollable with map view
 - Floating elements: SOS button (bottom right), journey info card (top)
 - Safe area insets: bottom = insets.bottom + 80 (for floating SOS button), top = headerHeight + Spacing.xl
- ****Components**:**
 - Full-screen map showing current location, route, and destination
 - Journey info card (floating, top): estimated arrival time, time remaining, distance
 - Floating SOS button (circular, bottom-right corner with shadow)

- Voice activation indicator (subtle, top-left)
- **Interaction**: SOS button has haptic feedback and 1-second hold-to-activate to prevent accidental triggers

3. **Journey Setup Screen** (Tab 2)

- **Purpose**: Configure journey with start, destination, and contacts to notify
- **Layout**:
 - Header: Default navigation, title "New Journey", right button "Start" (disabled until valid)
 - Main content: Scrollable form
 - Safe area insets: top = Spacing.xl, bottom = tabBarHeight + Spacing.xl
- **Components**:
 - Location inputs: "Starting Point" (auto-filled with current location), "Destination" (search)
 - Route selection cards (3 route options with time estimates)
 - Emergency contacts selection (multi-select from saved contacts)
 - Expected delay buffer (slider: 0-30 minutes)
 - Journey note field (optional, e.g., "Going to meet Sarah")
- **Form Actions**: "Start Journey" button in header (becomes active when destination is set)

4. **Profile Screen** (Tab 3)

- **Purpose**: Manage user details, emergency contacts, and app settings
- **Layout**:
 - Header: Transparent, title "Profile", right button "Edit"
 - Main content: Scrollable
 - Safe area insets: top = headerHeight + Spacing.xl, bottom = tabBarHeight + Spacing.xl
- **Components**:
 - User avatar (generated preset, tappable to change)
 - Display name
 - Personal details card: Height, weight, skin tone, eye color, distinguishing features
 - Emergency contacts list (names, relationships, phone numbers)
 - Settings sections:
 - Voice Activation: Code word setup, sensitivity settings
 - Notifications: Alert preferences
 - Privacy: Location permissions, data sharing
 - Account: Logout, delete account

5. **Edit Profile Screen** (Stack from Profile)

- **Purpose**: Update personal safety details
- **Layout**:
 - Header: Default navigation, title "Edit Profile", left "Cancel", right "Save"
 - Main content: Scrollable form
 - Safe area insets: top = Spacing.xl, bottom = insets.bottom + Spacing.xl
- **Components**:
 - Avatar picker (grid of preset avatars)
 - Form fields: Name, height, weight, skin tone (dropdown), eye color (dropdown)
 - Physical description text area
 - Medical info field (allergies, conditions - optional)
- **Form Actions**: Submit/Cancel in header

6. **Emergency Contacts Screen** (Stack from Profile)

- **Purpose**: Manage list of people to notify during emergencies
- **Layout**:
 - Header: Default navigation, title "Emergency Contacts", right "Add" button
 - Main content: List
 - Safe area insets: top = Spacing.xl, bottom = tabBarHeight + Spacing.xl
- **Components**:
 - Contact cards (name, relationship, phone, primary toggle)
 - Empty state: "Add your first emergency contact"
 - Add/Edit contact modal: Name, phone, relationship picker
- **Requirements**: Minimum 1 contact required, maximum 5 contacts

7. **SOS Confirmation Modal** (Modal overlay)

- **Purpose**: Final confirmation before triggering emergency alerts
- **Layout**: Center modal with high-contrast design
- **Components**:
 - Large warning icon
 - "Send Emergency Alert?" heading
 - Description: "Your location and alert will be sent to emergency contacts"
 - Two buttons: "Cancel" (secondary) and "Send Alert" (destructive, red)
 - Auto-trigger countdown: "Sending in 3... 2... 1..." (if voice-activated)
- **Interaction**: Haptic feedback on countdown, can cancel anytime

Design System

Color Palette

- **Primary Theme**: Trust & Safety
- **Primary**: #DC2626 (Red-600) - Emergency actions, SOS button
- **Primary Light**: #FCA5A5 (Red-300) - Alert backgrounds
- **Secondary**: #2563EB (Blue-600) - Journey actions, navigation
- **Secondary Light**: #93C5FD (Blue-300) - Journey cards
- **Success**: #16A34A (Green-600) - Journey completed, safe status
- **Warning**: #F59E0B (Amber-500) - Time warnings, delays

- ****Background****: #FFFFFF (White) for light mode
- ****Surface****: #F9FAFB (Gray-50) - Cards, sections
- ****Text Primary****: #111827 (Gray-900)
- ****Text Secondary****: #6B7280 (Gray-500)
- ****Border****: #E5E7EB (Gray-200)

Typography

- ****Display****: System Bold, 32pt - Onboarding headlines
- ****Title Large****: System Semibold, 28pt - Screen titles, SOS button text
- ****Title****: System Semibold, 20pt - Section headers
- ****Body****: System Regular, 16pt - Default text
- ****Caption****: System Regular, 14pt - Metadata, timestamps
- ****Button****: System Semibold, 16pt - All buttons

Visual Design Principles

****SOS Button Specifications****:

- Circular, 120pt diameter
- Background: Primary red (#DC2626)
- Text: "SOS" in white, Title Large
- Drop shadow (floating button specs):
 - shadowOffset: {width: 0, height: 2}
 - shadowOpacity: 0.10
 - shadowRadius: 2
- Active state: Scale to 0.95, increase shadow
- Hold-to-activate: Progress ring around button edge

****Touchable Feedback****:

- All buttons: Opacity 0.7 on press
- Cards: Scale to 0.98 on press
- SOS button: Haptic feedback (heavy impact)
- Emergency actions: Haptic warning pattern

****Journey Cards****:

- Rounded corners: 16pt
- Padding: 16pt
- Background: Surface color with 1pt border
- Active journey: Secondary light background, no shadow
- Completed journey: Success light background

****Form Inputs****:

- Height: 48pt
- Border radius: 8pt
- Border: 1pt, Border color
- Focus state: 2pt border, Secondary color
- Error state: 2pt border, Primary color with error message below

****Icons****:

- Use Feather icons from @expo/vector-icons
- SOS/Emergency: alert-circle
- Journey: navigation, map-pin
- Profile: user
- Settings: settings
- Location: map-pin
- Time: clock
- Contacts: users
- Voice: mic

Critical Assets

****Generated Assets****:

- **User Avatars**** (8 preset options):
 - Simple, geometric human silhouettes
 - Aesthetic: Minimalist, bold line art with solid background circles
 - Colors: Match secondary color palette for diversity
 - Purpose: Profile personalization
- **Emergency Alert Icon****:
 - High-contrast red shield with white exclamation mark
 - Used in notifications and alert screens
- **Journey Status Icons****:
 - Green checkmark circle (completed safely)
 - Yellow warning triangle (delayed but safe)
 - Red alert circle (SOS triggered)

****No other custom graphics needed**** - rely on Feather icons and system UI

Accessibility Requirements

- ****Color Contrast****: WCAG AAA for all text (7:1 ratio minimum)
- ****Touch Targets****: Minimum 44x44pt for all interactive elements
- ****Voice Activation****: Visual feedback when listening for code word (pulsing mic icon)
- ****Emergency Mode****: High contrast mode auto-enables during SOS

- ****Screen Reader****: All critical actions properly labeled
- ****Haptic Feedback****: Mandatory for emergency actions
- ****Offline Support****: Core SOS features must work without internet

Interaction Design

****Background Tracking****:

- Persistent notification while journey is active
- Location updates every 30 seconds
- Battery optimization: reduce frequency if battery <20%

****Emergency Alert Flow****:

1. SOS trigger (button hold or voice code word)
2. Haptic warning + countdown modal (3 seconds)
3. Send location + alert to emergency contacts
4. Show "Alert Sent" confirmation with contact list
5. Continue sharing live location every 15 seconds
6. Option to "Cancel Alert" or "Call 911"

****Journey Monitoring****:

- Green status: On time
- Yellow status: Delayed beyond buffer
- Red status: Exceeded expected time + buffer by 10+ minutes → Auto SOS trigger

****Onboarding****:

- Permission requests must explain why (location, microphone, notifications)
- Voice code word setup requires 3 test attempts to ensure recognition
- Emergency contact verification via SMS code (optional but recommended)

FILE: App-Complete/.expo/README.md

> Why do I have a folder named ".expo" in my project?

The ".expo" folder is created when an Expo project is started using "expo start" command.

> What do the files contain?

- "devices.json": contains information about devices that have recently opened this project. This is used to populate the "Development sessions" list in your development builds.
- "settings.json": contains the server configuration that is used to serve the application manifest.

> Should I commit the ".expo" folder?

No, you should not share the ".expo" folder. It does not contain any information that is relevant for other developers working on the project, it is specific to your machine. Upon project creation, the ".expo" folder is already added to your ".gitignore" file.

FILE: App-Complete/.git/COMMIT_EDITMSG

Update app name, theme, and add new journey and profile features

Refactor app name to "Safe Connect", update theme colors, implement journey tracking and history, and enhance user profile management with new screens for editing profile, managing emergency contacts, and viewing settings. Also includes setup for onboarding and SOS confirmation flows, and integrates location and haptics functionalities.

FILE: App-Complete/.git/description

Unnamed repository; edit this file 'description' to name the repository.

FILE: App-Complete/.git/hooks/applypatch-msg.sample

#!/nix/store/cfqbabpc7xwg8akbcchqbq3cai6qq2vs-bash-5.2p37/bin/bash

An example hook script to check the commit log message taken by
applypatch from an e-mail message.

The hook should exit with non-zero status after issuing an
appropriate message if it wants to stop the commit. The hook is
allowed to edit the commit message file.

To enable this hook, rename this file to "applypatch-msg".

```
. git-sh-setup  
commitmsg="$(git rev-parse --git-path hooks/commit-msg)"  
test -x "$commitmsg" && exec "$commitmsg" ${1+"$@"}  
:
```

FILE: App-Complete/.git/hooks/commit-msg.sample

#!/nix/store/cfqbabpc7xwg8akbcchqbq3cai6qq2vs-bash-5.2p37/bin/bash

An example hook script to check the commit log message.
Called by "git commit" with one argument, the name of the file
that has the commit message. The hook should exit with non-zero
status after issuing an appropriate message if it wants to stop the
commit. The hook is allowed to edit the commit message file.

To enable this hook, rename this file to "commit-msg".

Uncomment the below to add a Signed-off-by line to the message.
Doing this in a hook is a bad idea in general, but the prepare-commit-msg
hook is more suited to it.

SOB=\$(git var GIT_AUTHOR_IDENT | sed -n 's/^(\>)\).*\$/Signed-off-by: \1/p')
grep -qs "^\$SOB" "\$1" || echo "\$SOB" >> "\$1"

This example catches duplicate Signed-off-by lines.

test "" = "\$(grep '^Signed-off-by: ' "\$1" |
 sort | uniq -c | sed -e '/^[]*1[]/d')" || {
 echo >&2 Duplicate Signed-off-by lines.
 exit 1
}

FILE: App-Complete/.git/hooks/fsmonitor-watchman.sample

#!/nix/store/nxwlxxfxkd6bm570nb6gv0g6pghp7i4c-perl-5.40.0/bin/perl

use strict;
use warnings;
use IPC::Open2;

An example hook script to integrate Watchman
(<https://facebook.github.io/watchman/>) with git to speed up detecting
new and modified files.

The hook is passed a version (currently 2) and last update token
formatted as a string and outputs to stdout a new update token and

```

# all files that have been modified since the update token. Paths must
# be relative to the root of the working tree and separated by a single NUL.
#
# To enable this hook, rename this file to "query-watchman" and set
# 'git config core.fsmonitor .git/hooks/query-watchman'
#
my ($version, $last_update_token) = @ARGV;

# Uncomment for debugging
# print STDERR "$0 $version $last_update_token\n";

# Check the hook interface version
if ($version ne 2) {

<<\DOC_END

```

This sample hook safeguards topic branches that have been published from being rewound.

The workflow assumed here is:

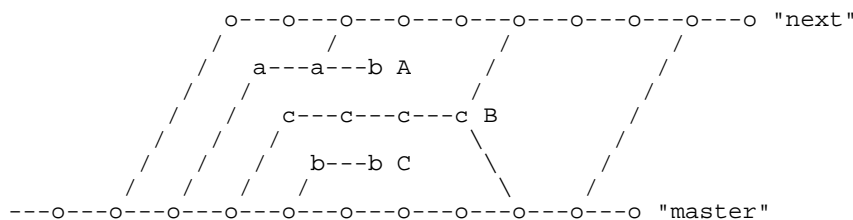

- * Once a topic branch forks from "master", "master" is never merged into it again (either directly or indirectly).
- * Once a topic branch is fully cooked and merged into "master", it is deleted. If you need to build on top of it to correct earlier mistakes, a new topic branch is created by forking at the tip of the "master". This is not strictly necessary, but it makes it easier to keep your history simple.
- * Whenever you need to test or publish your changes to topic branches, merge them into "next" branch.

The script, being an example, hardcodes the publish branch name to be "next", but it is trivial to make it configurable via \$GIT_DIR/config mechanism.

With this workflow, you would want to know:

- (1) ... if a topic branch has ever been merged to "next". Young topic branches can have stupid mistakes you would rather clean up before publishing, and things that have not been merged into other branches can be easily rebased without affecting other people. But once it is published, you would not want to rewind it.
- (2) ... if a topic branch has been fully merged to "master". Then you can delete it. More importantly, you should not build on top of it -- other people may already want to change things related to the topic as patches against your "master", so if you need further changes, it is better to fork the topic (perhaps with the same name) afresh from the tip of "master".

Let's look at this example:

A, B and C are topic branches.

- * A has one fix since it was merged up to "next".
- * B has finished. It has been fully merged up to "master" and "next", and is ready to be deleted.
- * C has not merged to "next" at all.

We would want to allow C to be rebased, refuse A, and encourage B to be deleted.

To compute (1):

```
git rev-list ^master ^topic next
git rev-list ^master          next

if these match, topic has not merged in next at all.
```

To compute (2):

```
git rev-list master..topic

if this is empty, it is fully merged to "master".
```

FILE: App-Complete/.git/hooks/push-to-checkout.sample

```

-----
#!/nix/store/cfqbabpc7xwg8akbcchqbq3cai6qq2vs-bash-5.2p37/bin/bash

# An example hook script to update a checked-out tree on a git push.
#
# This hook is invoked by git-receive-pack(1) when it reacts to git
# push and updates reference(s) in its repository, and when the push
# tries to update the branch that is currently checked out and the
# receive.denyCurrentBranch configuration variable is set to
# updateInstead.
#
# By default, such a push is refused if the working tree and the index

```

```

# of the remote repository has any difference from the currently
# checked out commit; when both the working tree and the index match
# the current commit, they are updated to match the newly pushed tip
# of the branch. This hook is to be used to override the default
# behaviour; however the code below reimplements the default behaviour
# as a starting point for convenient modification.
#
# The hook receives the commit with which the tip of the current
# branch is going to be updated:
commit=$1

# It can exit with a non-zero status to refuse the push (when it does
# so, it must not modify the index or the working tree).
die () {
    echo >&2 "$*"
    exit 1
}

# Or it can make any necessary changes to the working tree and to the
# index to bring them to the desired state when the tip of the current
# branch is updated to the new commit, and exit with a zero status.
#
# For example, the hook can simply run git read-tree -u -m HEAD "$1"
# in order to emulate git fetch that is run in the reverse direction
# with git push, as the two-tree form of git read-tree -u -m is
# essentially the same as git switch or git checkout that switches
# branches while keeping the local changes in the working tree that do
# not interfere with the difference between the branches.

# The below is a more-or-less exact translation to shell of the C code
# for the default behaviour for git's push-to-checkout hook defined in
# the push_to_deploy() function in builtin/receive-pack.c.
#
# Note that the hook will be executed from the repository directory,
# not from the working tree, so if you want to perform operations on
# the working tree, you will have to adapt your code accordingly, e.g.
# by adding "cd .." or using relative paths.

FILE: App-Complete/.local/state/replit/agent/rapid_build_success

FILE: App-Complete/attached_assets/Pasted-it-is-a-safety-pupose-idea-if-a-male-or-female-is-

it is a safety pupose idea if a male or female is attacked by someone or some people at a place ,if it is place there are someone to help there is no problem but if it is a place there is no one arround then it is so tough to escape and if there is no chance to escape then it is not at all good ,so what it thought is if there is an app like to save like ,when the app user is attacked then he will say a code word which triggers the app and sends the alert to nearest police station and nearest hospital and to the contacts which the user has given to the app with some required information to save the user like their location,their identity(height,skin tone,hair color,eye color,biometrics and what are required to identify and save the user).if the user is not able to speak then it should alternately identify the gestures to trigger the process and if both of the methods are not available for the user then it may sense abnormal breathing of the user and trigger the process. and suggest me if any of these may not be able to the user. there might be a chance of false alerts, so for that if the app is triggered first send an alarm or alert to the user if is offed by the user then abort sending alert to plocce ,hospital and to contacts if not offed then proceed to send alerts. if the attacker is beside the user their might be a chance of offing the alarm or alert by the attacker so set a voice recognizer to off the alarm or alert,set a certain time to off the alarm or alert. if there is a scenario like the user is hiding from attackers and the app is triggered and send the alarm or alert to the user first to know wheather it is true or false alert then there is a chance that the alarm or alert may report to the attacker unknowingly by the sound of alarm or alert or if the user is in dark place the lighting of screen may report to attacker so sugggest something for this problem. if the it is a true alert then provide some sufficient backup battery and data (net) to the device, once he or she is out of risk they can pay for the provided data(net),because we don't what happens when (the battery may die or the network will not be there).

this is one thing and the another one is

scenario: if a person is going out and after some time he or she gone missing(kidnapped by some one or at that time some drunken people attempted unwanted thing on females and other things which maight cause tough to survive for the person) if the person is son or daughter of a bigshot person or department they can search for them without any delay because of the influence they have but in the case of middle class family it is not possible ,first they will ask to file a complient and they will take so much time to ivestigate this will increase the risk for the person who gone missing to survive, so for this my thought is first in the app the user details need to saved like height,weight,skin tone ,eyecolour,personality and other required details of the person to identify easily,, and some contacts for sending alerts in case of any problem occurs(mainly parents contact and trusted well wishers contacts).then while she or he is going out the user need to set starting point and destination point then the app will find possible routs and estimate the time to reach the destination and that rout and estimated time will be sent to the parents like a message that yourr child is going from here to here via this route and it will take this much of time. if the child is changing route then immediately estimate time for that route and send the updated route and time to the parrents so they can track them where they are going, if the child doesnt reach the destination in time or the child stopped at a place for a certain time the the app will send an alert to the child there the child should give explainaion to that by offing alarm and should set the time for how much he or she gonna stop there and this explanation will sent to the parent that the child has stoppped here for this reason and he or she will move after this time if the child doesnt respond to the alarm the alerts will go to the parents and well wisher contacts that the child has stopped at this place at this time and he or she is not responding for the pause alert so please check them ,if the child is not responding to the parent calls and the if parents suspect something bad is going to happen then parents can send alerts to nearest poloce station ,hospitals and required to rescue them. for this we need user live location .while sending alerts the user identity and location will be sent. and the other one is when some is driving if the speed suddenly drops simply it should detect accedent if the alert detects it is an accedenet the the user will get

alarm to off that in a certain time if it doesnot offed then the alerts should go to the nearest hospital ,police station and other required to rescue the person.the alarm to the user after detection is to manage false alerts.

this is what my idea is so you analyse this and modify if any loopholes are there and suggest solutions for that and also help me to develop this perfectly.
